New Book Raps 'Secrecy' About Flying Saucers

DEFIANCE—A new book, "The Challenge of Unidentified Flying Objects," by Prof. Charles A. Maney, physicist at The Defiance College, and Richard Hall, promotes to "rattle Washington teacups from the Pentagon to Capitol Hill," according to a report by James R. Hobson in the WORLD, a compact national newspaper published in Washington. Hall is secretary of the National Investigations Committee on Aerial Phenomena.

A Washington civilian organization, the National Investigations Committee on Aerial Phenomena (NICAP), sets forth its own convictions in the Maney-Hall book's opening chapter:

"It is the majority opinion of the NICAP Board (which includes professors, scientists, a former CIA director)... that the unknown devices reported by reliable observers are intelligently controlled machines from outer space."

The book also deplores the alleged secrecy, the debunking and the careless investigations that it says have characterized the Air Force's handling of UFO reports.
